

# Take Charge of Your Heart

**If you have symptoms of heart disease, the HeartFlow Analysis can help provide clarity.**

The non-invasive HeartFlow Analysis is a personalized cardiac test that helps your doctor better assess heart disease. It shows how any blockages you may have impact blood flow to your heart.

**With this helpful information, you and your doctor can determine the next step in your treatment plan.**

## How it Works

1

Your doctor will order a CT scan to look for blockages in your heart arteries. If the scan shows signs of disease, your doctor may order a HeartFlow Analysis.

2

With trained specialists and powerful computers, the HeartFlow Analysis calculates how much each blockage limits blood flow to your heart.

3

Your doctor receives a digital, color-coded, personalized 3D model of the blood flow to your heart. This helpful information provides clarity in determining the next step in your treatment plan.

Ask your doctor if the HeartFlow Analysis is right for you.

The HeartFlow Analysis may not be appropriate for all patients. If your physician suspects coronary artery disease and orders a coronary CT, your doctor may decide that you are eligible for a HeartFlow Analysis. While no diagnostic test is perfect, the HeartFlow Analysis has demonstrated higher diagnostic performance compared to other non-invasive cardiac tests<sup>1</sup>.
