

Reveal the True Plaque Burden

While a coronary artery calcium (CAC) score measures calcified plaque, Heartflow Plaque Analysis goes beyond by providing a comprehensive view of both calcified and non-calcified (vulnerable) plaque. **This is critical as vulnerable plaque is unstable and a significant source of cardiovascular disease (CVD) risk.**¹

How it works

AI-powered Precision for Identifying and Managing Coronary Artery Disease

Increase your diagnostic confidence

Heartflow's Plaque Analysis has 95% agreement with Intravascular Ultrasound (IVUS), the invasive gold standard, in precisely quantifying and characterizing coronary plaque.²

Help every patient own their heart health

Plaque Analysis measures the amount and type of plaque in your patient's arteries, giving a clear personalized view of their heart. This information helps patients understand their risk and make an informed decision.^{1,3}

See what might be missed

Quantifies and characterizes calcified and non-calcified (vulnerable) plaque.

Optimize patient care

66% of patients received a refined management plan when Plaque Analysis was utilized.³

Patients can now be referred to [Insert Hospital Name]
to receive precise heart care using this proven, revolutionary technology.
